

COVID-19 Response Package

# Protect Your Team

## A safe and seamless transition

Returning to our buildings and campuses requires unexpected and unfamiliar changes to our common spaces—Suffolk can help you achieve a seamless and safe transition. Our teams have adapted our jobsites and offices to incorporate social distancing and industry-leading protocols that keep our employees and trade partners safe and healthy, these measures have since become government standards for the City of Boston and beyond. Suffolk also quickly mobilized to build Project Hope, a 1,000-bed field hospital in downtown Boston for COVID-19 patients, in just three days. As your trusted partner, we can apply these learnings and techniques to help you make the necessary adjustments to your spaces that will keep your employees safe and comfortable.

In collaboration with our fully certified environmental health, safety, and hygiene consulting partner, Cashins & Associates, Inc., and our building partner, Liberty Construction Services, we can help you integrate infection protection, personal separation, and hygiene protocols into your spaces. This is a stressful time for all of us and we want to help ensure that your transition to the “new normal” goes smoothly.

To discuss how Suffolk can help you, please contact Sean Edwards at [sedwards@suffolk.com](mailto:sedwards@suffolk.com) or (978) 804-6231

### Health and Safety Controls

- Development of stringent site-specific safety plans
- Implementation of strict protocols to reduce risk of infection and spread
- Establishment of screening measures for worker and occupant re-entry
- Design, stocking, and supply of PPE stations

### Technology for Continued Safety

- Supply and installation of FDA registered fever screening equipment
- Training of facilities staff

### Social Distancing Planning

- Interior fit-outs and spatial reconfiguration
- Establishment of occupant traffic patterns
- Installation of barriers and partitions

### Deep Cleaning and Disinfecting

- Development of customized site-specific cleaning/disinfection procedures
- Execution of deep clean and sterilization that exceeds CDC guidelines
- Utilization of 3<sup>rd</sup> party verification to confirm sterilization meets current industry standard of care protocols

### Facilities Maintenance

- Implementation of ongoing cleaning and disinfecting program
- Development of response action plans as needed

### Evaluation of MEP/HVAC Systems

- Evaluation of ventilation systems and indoor air quality
- Industrial hygiene consulting
